## HAWAII – CLIMATE

<https://www.britannica.com/place/Hawaii-state/Climate>

Hawaii lies just below the Tropic of Cancer, and its mild tropical climate is considered by many people to be the world's ideal. Although the weather is often humid by U.S. mainland standards, temperatures are conditioned by the northeast trade winds, which prevail most of the year and make living on the islands delightfully comfortable. As moisture-laden air is carried over the islands, most frequently by the trade winds, it is apt to condense, form cap clouds, and dissipate against the shores and mountains of the windward coasts, which are therefore more lush in foliage than the leeward coasts. Most Hawaiians recognize only two seasons: summer and winter. Summer (kau) lasts from May through October, with high temperatures and reliable trade winds. The rainy season, winter (ho'oilō), lasts from November to April, with cooler temperatures and frequent rainstorms. The average temperature in Honolulu is in the low 70s F (about 22 °C) in the coolest month and in the high 70s F (about 26 °C) in the warmest, though extreme temperatures in the high 50s F (about 14 °C) and low 90s F (about 33 °C) have been recorded there. The average water temperatures off Waikiki Beach in Honolulu range from the mid-70s F (about 24 °C) in late February to the high 70s F (about 26 °C) in late September. The temperature falls about 3.5 °F (2 °C) with every 1,000 feet (300 metres) of elevation, so mountainous regions are considerably cooler, especially during the winter months, when there can be frost; a temperature of 1.4 °F (-17 °C) has been recorded on the summit of Mauna Kea, and winter snows frequently blanket the crests of Mauna Kea and Mauna Loa. Rainfall variations throughout the state are dramatic. Mount Waialeale, on the island of Kauai, is often called the wettest spot on Earth, with an annual average rainfall of about 450 inches (11,430 mm).

## MAJOR CITIES:

Kauai – Koaao

Oahu – Honolulu

Maui – Kahului

Hawaii – Captain Cook
